

PROFESSIONAL DRONE SERVICES

Fully insured and qualified to the highest level, we utilise a high end Hollywood grade drone with Zeiss prime lenses for our aerial work. Which means excellence is built in to every single shot we do for you.

ZENMUSE X7

Empathic Productions offers high resolution drone aerial data services. We are unique in that our background and experience is video production and photography. This means we can service your media requirements end-to-end with ground and aerial footage and video production/editing. Our drone is state of the art and highly versatile.

unparalleled quality

DJI INSPIRE 2 ZENMUSE X7 DRONE
24MP HIGH RESOLUTION STILLS
HIGH QUALITY ZEISS PRIME LENSES
35mm FULL FRAME SENSOR

editing services

ADOBE PREMIERE PRO
ADOBE AFTER EFFECTS
ADOBE MEDIA ENCODER
DA VINCI RESOLVE

With our film industry post-production workflow, we can produce your project at the pace you require, ensuring you get the media you need in the minimum of time. Our powerful industry standard editing software means we can create professional final output to meet all your media requirements, as well as apply colour grades if necessary.

Film and video aerial work

SMOOTH
STABLE
SUPERB

COST EFFECTIVE

Before camera drones were properly developed, aerial photography was achieved by using a helicopter, plane, crane or cherry picker. With our top flight camera drone we can produce amazing aerial shots without costing a fortune.

TIME EFFECTIVE

Cranes and jib arms are cumbersome and can take some time to set up. Our drone can be ready to go relatively quickly meaning rehearsals and shooting can take place a lot sooner which means more productivity.

VISUALLY EFFECTIVE

Our camera drone produces absolutely stunning and captivating shots, especially in our capable hands. Our drone has a full 35mm sensor with 14 stops of dynamic range which means it produces cinema grade footage.

HOW DOES A DRONE SURVEY WORK?

A drone survey is a cost-efficient way to take high resolution photographs and video of the area below. They are also referred to as a UAV (Unmanned Aerial Vehicle) surveys or UAS (Unmanned Aerial System) surveys. They can be controlled by a remote ground control system.

WHY USE A DRONE SURVEY?

Drones, once a novelty, are now a versatile and invaluable tool for supporting surveying operations. The drones used by Empathic Productions are the same high resolution camera systems that we use in our film and documentary cinematic productions. The drone camera pixel size reaches 3.91 μm .

MINIMAL DISRUPTION TO PROPERTY

When surveying with traditional equipment, often access to the site would have to be closed off and operations suspended for the time of the survey. Using a drone minimises disruption to the area. We are fully licensed and insured to work within urban locations.

All work performed is conducted with completed risk assessment surveys and commercial insurance in accordance with Civil Aviation Authority requirements. Pre-flight surveys and risk assessments take the guessing out of safety which is our number one priority for our operations. Empathic Productions is a UK based company, providing certified, insured, aerial videography and photography services by means of an Unmanned Aerial Vehicle (UAV) and operate under the Civil Aviation Authority (CAA) Air Navigation Order 2016.
